To: Public Drinking Water Protection Committee  
Through: Juan Mariscal, P.E., General Manager  
From: Beverly O'Keefe, Supervising Planner  
Date: December 26, 2006  
Subject: Drought Update: Current Water Conditions

---

**BACKGROUND:** Pursuant to State Guide Plan Element 724: The Rhode Island Drought Management Plan, the Water Resources Board is required to assess water conditions monthly. Staff has assembled climate information from a variety of sources to monitor the potential for drought conditions in Rhode Island which is summarized below:

Data Source	Date	Report Summary
NOAA NWS Taunton MA Climate Report	Nov. 2006	1.97" received TF Green Airport - 1.35" below normal for November
USGS Surface Water Runoff Report	Nov. 2006	Above Normal
Scituate Reservoir	Dec. 26, 2006	104.3% of Capacity
USGS Groundwater Level Summary	Nov. 2006	Above Normal-
USGS RI Groundwater Level Detail Well Report	Nov. 2006	Six new high or equaled water levels reported
NOAA NWS Drought Severity Index: Palmer	23 Dec. 2006	Extremely Moist
NOAA NWS Crop Moisture Index	23 Dec. 2006	Slightly Dry/Favorably Moist
NOAA NWS Drought Monitor Seasonal Assessment	19 Dec. 2006	Normal
NOAA Seasonal Drought Outlook (through November 2006)	21 Dec. 2006	Normal

Rhode Island month to date rainfall recorded at T.F. Green Airport (normal rainfall value through November 27 is 3.83 inches). Rainfall recorded since January 1 totals +51.89 inches, a departure from normal of + 10.15 inches for the eleven-month period. Preliminary National Weather Service Precipitation Data ending October 2006 is provided as an attachment.

The **USGS Water Conditions Statement** is summarized in three tables (Surface Water Runoff, Ground-water Level Conditions, and Summary of Rhode Island Ground-Water Levels) embedded in this memorandum.

Surface-water flows at the end of November 2006 were generally above normal (highest 25 percent of flows for November) in Massachusetts and Rhode Island. Ground-water levels were generally above normal (highest 25 percent of levels for November in Rhode Island).

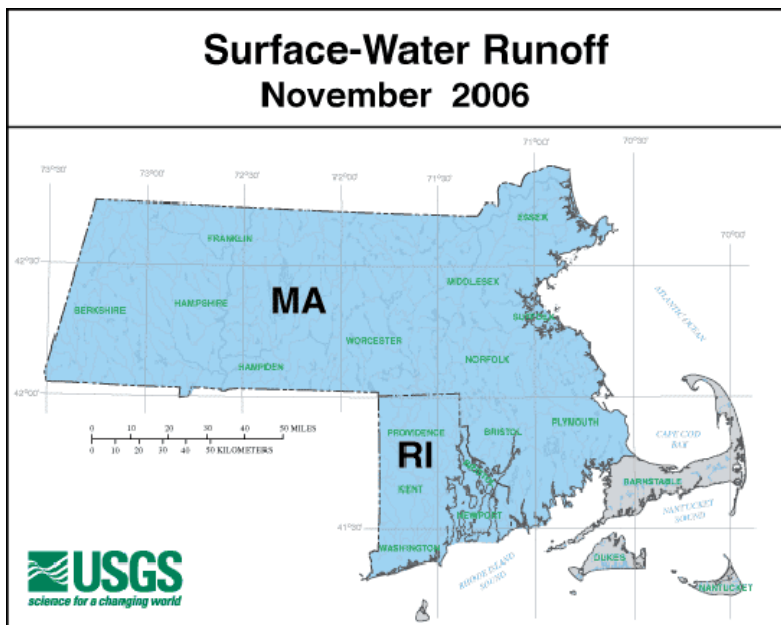

Table 1: Surface Water Runoff

### COMPARISON WITH MONTHLY NORMAL RANGE

- ABOVE NORMAL – within the highest 25 percent of record for this month**
- NORMAL RANGE**
- BELOW NORMAL – within the lowest 25 percent of record for this month**
- NO STREAM DATA**
- INDEX STREAM GAGE AND IDENTIFIER LETTER**

**NOTE: Additional sites from those shown are used to determine ranges**

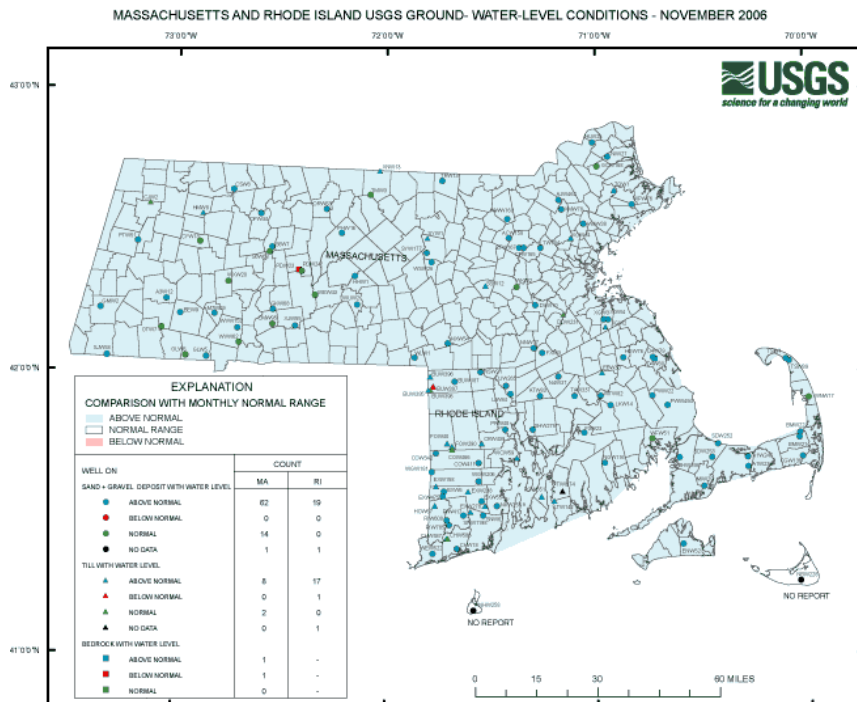

Table 2: Ground Water-Level Conditions

Borden Brook/Cobble Mountain, Quabbin, and Scituate Reservoirs were 93-, 95- and 103-percent full, respectively, at the end of November. In comparison, Borden Brook/Cobble Mountain, Quabbin, and Scituate Reservoirs were 82-, 92- and 88-percent full, respectively, at the end of October.

**TABLE 3: SUMMARY OF GROUND-WATER LEVELS**                      **November 2006**                      PROVISIONAL  
 (NOTE: Wells with \* also available in real-time at top of Ground-Water Data page;

The NOAA National Weather Service (NWS) Drought Severity Index for the period ending Dec. 23, 2006 shows extremely moist conditions for the region (Table 4). The Crop Moisture Index for the same time period shows slightly dry/favorably moist conditions (Table 5).

**Table 4: Drought Severity Index**

**Table 5: Crop Moisture Index**

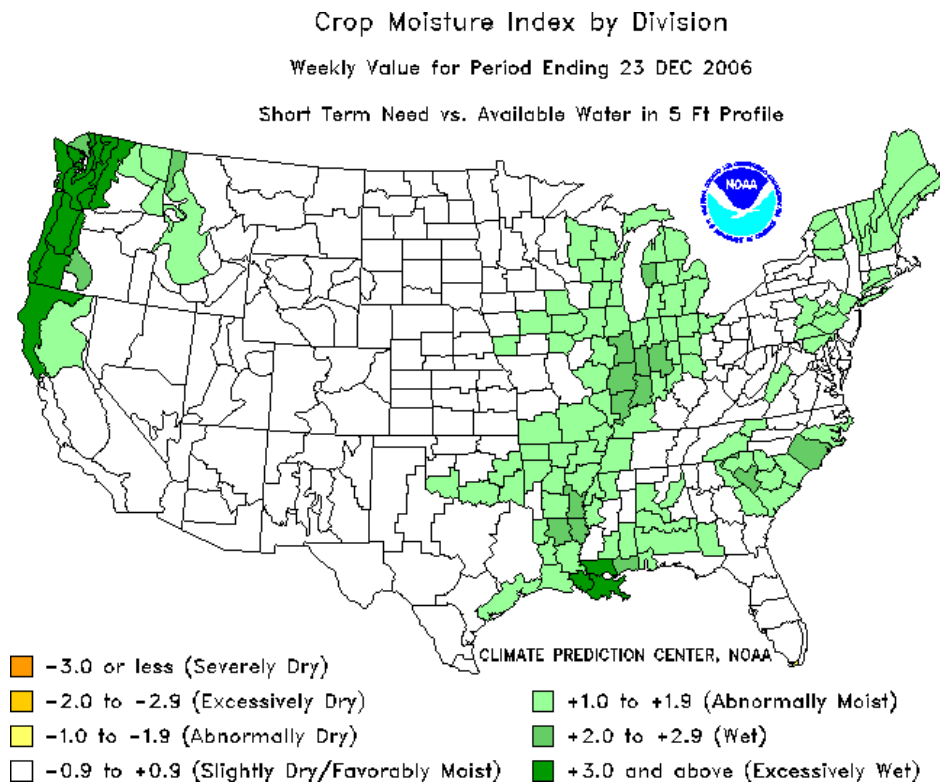

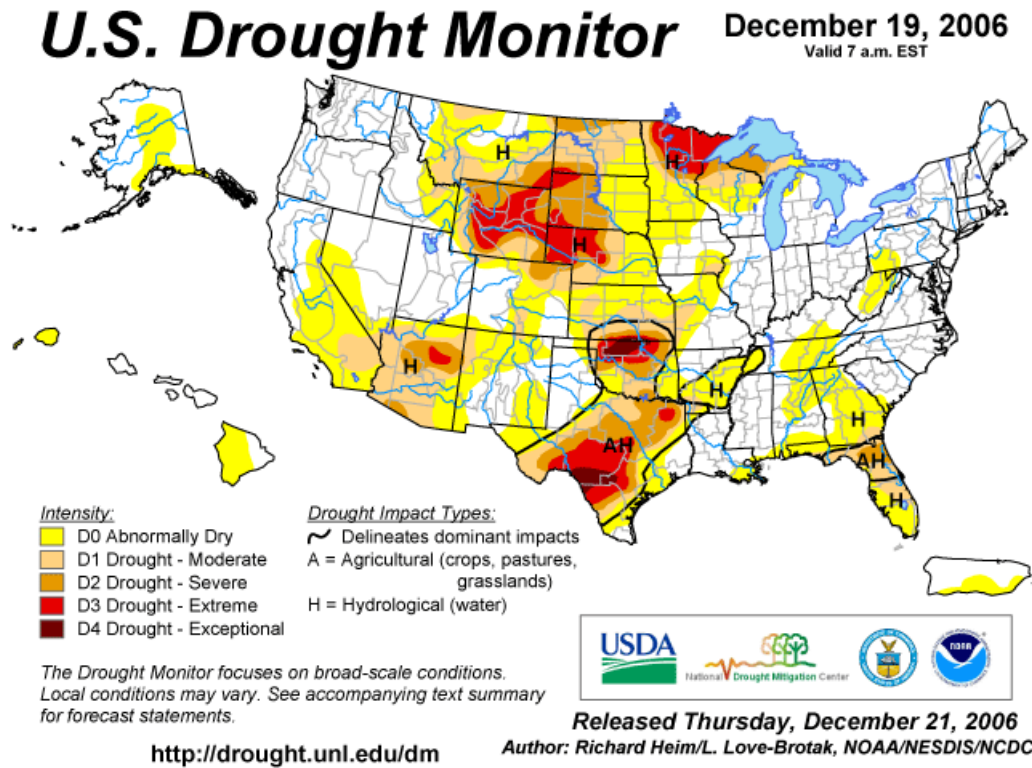

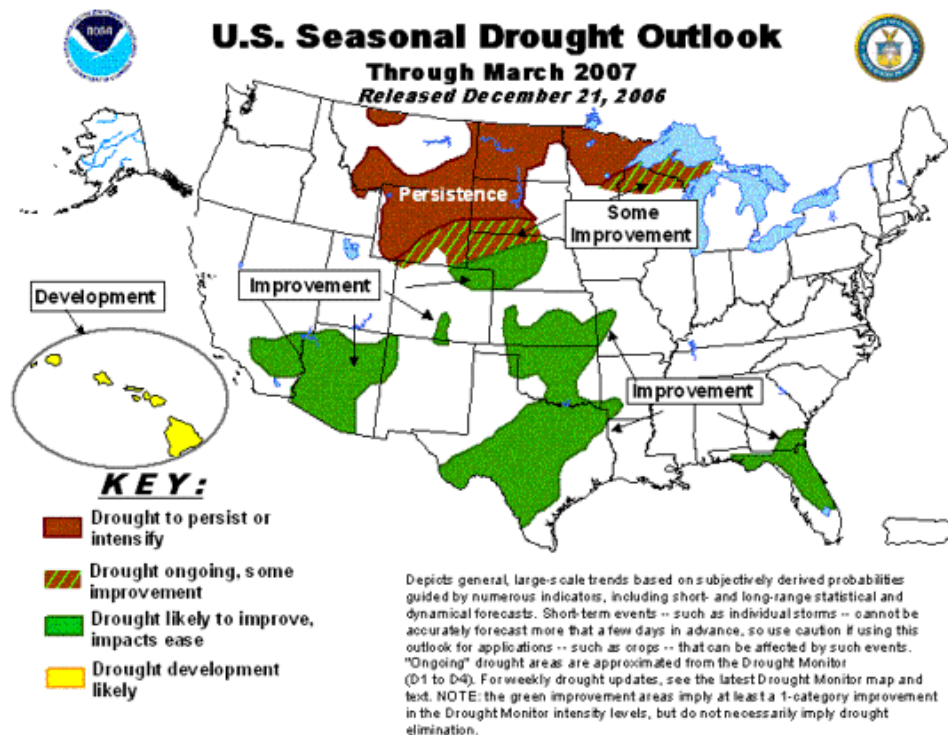

Table 6: US Drought Monitor

Tables 6 and 7 present national seasonal assessment and state rankings based on precipitation. The Drought Monitor (Table 6) focuses on broad scale conditions, and portrays Rhode Island experiencing a normal intensity through December 19, 2006. The NOAA Seasonal Drought Outlook through March 2007 projects “normal” conditions for Rhode Island.

Table 7: NOAA Seasonal Drought Outlook

## DISCUSSION

Precipitation patterns for Rhode Island have remained within normal-above normal limits through December 2006. Water conditions will continue to be closely monitored over the next month by the Water Resources Board staff.
